

PROJECT Windsor International Aquatic Centre

VisioniQ Video Scoreboards for the New Windsor International Aquatic Centre

RecTec Management Group was looking to complement their aquatic timing systems with high quality video scoreboards at the new Windsor International Aquatic Centre. Media Resources partnered with RecTec on this exciting project to help meet their deadline for the 2013 International Children's Games this August.

Media Resources designed, manufactured, and installed two 16mm VisioniQ video displays that are 11ft high by 18ft wide. They are programmed with custom software to display the Swiss Timing results, along with cameras to video capture swimmers at the start and finish and also for video playback. The video displays are also engineered for single, double or combined ended swim meet events.

Tim Hamel of RecTec Management says, *"The video scoreboard project was challenging at times, but we were able to make it come together all in a successful and timely fashion. We are very pleased with the exciting visual impact that it has already created during the games."*

The new VisioniQ video displays are a spectacular element for the WIAC, as it offers real time results and crowd enhancement for all upcoming events and swim meets.
